

Safety Guidelines

Aerial acrobatics is a beautiful discipline, but it carries a great deal of responsibility. Therefore, before each use of the equipment, thoroughly check the apparatus and every suspension element. Remember, if you notice any signs of wear on any of the elements, contact the manufacturer immediately and do not continue training until you receive a clear response from the manufacturer.

Follow these guidelines:

1. The installation of all types of ceiling mounts must be performed by a qualified person, such as a climber or a construction worker certified to install suspensions for people.
2. **Always check** the apparatus and all suspension elements before starting a training session.
3. If you notice **any wear on the apparatus** or any part of the structure, stop the training immediately and inform the manufacturer.
4. **Wear on metal or aluminum elements of 1 mm or more into the material** disqualifies that element from further use. It must be replaced immediately. Metal elements, while in use, may rub against each other, causing small particles to fall to the ground. Caution should be taken to avoid exercises with the head facing upwards to prevent particles from getting into the eyes. exercise extra caution.
5. **Snags and holes in fabrics and hammocks** disqualify them from further use.
6. A crash mat is essential during training; do not perform exercises without mat protection.
7. The manufacturer is not responsible for accidents resulting from a lack of care and equipment inspections. Every device wears out and needs to be checked regularly. Of course, manufacturing defects/material defects are covered by the warranty and should be reported to the manufacturer immediately.
8. The apparatus and accessories sold in our store are intended exclusively for aerial acrobatics. **They are not suitable for swinging, spinning, or other non-acrobatic forms of play.**
9. Certificates and instructions are available in a separate section.

Let's train wisely and take care of our safety!
